

Why Might Attention Not Be Converting?

A public-data audit of strong Instagram visibility and possible barriers to customer confidence and conversion

BRAND STUDIED: HOUSE OF SUNNY

01 - BRAND SNAPSHOT

House of Sunny

London-based independent contemporary womenswear brand with a focus on distinctive design and more conscious production

FOUNDED

2011, in Hackney, East London

Leadership

Sunny Williams — Founder and Creative Director
Camilla Ley — Managing Director

CATEGORY

Signature knitwear, boho-print dresses, statement outerwear

PRICE RANGE

≈ \$120–\$220 (mid-contemporary)

PRODUCTION MODEL

Small-batch and limited-run collections using recycled and more eco-conscious materials

PRIMARY CHANNEL

DTC website, with Instagram playing a major role in brand discovery

02 - TARGET CUSTOMER

Who the brand appears to be reaching

Inferred customer profile based on the brand's public content, product positioning and pricing not internal customer data.

The Aspirational Optimist

22–32 · urban · interested in fashion and creative culture · often discovers brands through social media rather than direct search

"I want something that feels different and expressive, without paying designer-level prices."

Discovery behaviour

Often finds brands through Instagram Explore and Reels, TikTok FYP, and Pinterest moodboards, rather than searching for the brand directly.

Values

Strong interest in print, colour and individuality. Sustainability matters, but may not always be the main reason for purchase.

Shopping behaviour

Mixes affordable everyday pieces with one or two statement items each season from brands such as House of Sunny, Realisation Par and Free People.

Key hesitation

Uncertainty around sizing when shopping online, along with some price sensitivity for higher-priced items.

How the brand currently presents itself

“Trend-led, more consciously made statement pieces for people who want something different.”

Positioning based on the brand's website, product design and social media presence

1

Distinctive design

Signature knitwear, floral prints and bold silhouettes give the brand a recognisable visual identity.

2

Small-batch sustainability

Limited production runs and recycled materials support its more conscious brand image.

3

Influencer visibility

Instagram, celebrity placements and influencer styling have played an important role in building awareness.

4

DTC-focused retail

The website-led model gives the brand more control over pricing and presentation, while also making digital traffic very important.

The gap: The brand communicates its aesthetic and influencer appeal strongly, but gives less attention to areas such as fit confidence, customer service and community. These areas can affect whether interest turns into a purchase.

04 - INSTAGRAM / CONTENT ANALYSIS

A large audience with comparatively low visible interaction

Public-data snapshot: 30 August 2026

Follower count captured from the official Instagram profile. Engagement, likes and comments are public-data estimates and are not internal Instagram Insights. Figures accessed 30 August 2026.

Visible engagement vs. selected external fashion benchmark

- The feed relies heavily on static product and campaign photography, with less use of Reels and video content.
- There is also limited reposted UGC or customer styling content, which makes the feed feel more brand-led than community-led.
- Captions often focus on the product name and price, with fewer questions, hooks or CTAs that encourage comments, saves or conversation.
- Overall, the brand has a large audience, but the level of interaction is relatively low. This can make it harder for new content to gain strong organic reach.

Where customers may lose confidence

Discovery appears to support visibility

Strong visual content and influencer placements appear to generate brand visibility. Without internal traffic or attribution data, their effect on website visits cannot be confirmed.

Sizing becomes a concern

Public reviews mention inconsistent fit across some styles, and some shoppers feel the available guidance is not enough to purchase confidently.

Source: Public Trustpilot reviews, accessed 30 August 2026. Reviews are self-selected and may not represent the complete customer base.

Checkout appears straightforward

The brand's published policy states that customs fees are covered for USA orders. Return conditions and costs vary by region and should be reviewed before purchase.

Post-purchase experience can affect trust

Some public reviews mention slow dispatch and difficulty reaching customer support, particularly around refunds. This may reduce the chance of repeat purchases and positive reviews.

Possible Barriers Between Attention and Purchase

01

Large audience, lower visible interaction

Public Instagram indicators show a large follower base and comparatively low visible interaction against the selected benchmark. This identifies an engagement question, not a conclusion about sales performance.

02

Discovery-to-trust gap

The content shows that the products are visually appealing, but it does not always answer practical questions customers may have before purchasing, especially around fit and what happens if there is a problem with the order.

03

Post-purchase experience

Public reviews suggest that sizing uncertainty, delivery delays and difficulties reaching support may create purchase or repeat-purchase friction. Internal sales and retention data would be required to measure the commercial effect.

07 - 3 RECOMMENDATIONS

Turning attention into stronger customer confidence and conversion

01

Build more proof into the content mix

Increase the use of Reels, styling videos, try-ons, behind-the-scenes content and examples of how pieces fit on different body types. This would make the content more useful as well as visually appealing.

02

Make sizing easier to understand before checkout

Add a clear size-and-fit guide to Instagram Highlights and product pages, use customer try-on content where possible, and show model height and size worn consistently. This could reduce uncertainty before purchase.

03

Use the post-purchase experience to build more community content

Provide clearer shipping updates, improve support response times, and encourage satisfied customers to share reviews or styling content that the brand can repost.

08 - EXAMPLE IMPROVED CONTENT

From a product-focused post to more useful customer content

Format	A short vertical Reel instead of only a static product image, giving customers a clearer view of the product in motion.
Real fit	Showing the same piece on different people directly addresses one of the main sizing concerns identified in the customer journey.
Simple CTA	“Comment SIZE for our fit guide” gives the audience an easy reason to interact while also offering them something useful in return.
Easy to repeat	The same format could also be used with customer styling and UGC, making it a practical content series rather than a one-off post.
